Direct Submission

Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

ON Nov 15, 2002 this sequence version replaced gi:22856341.

The Sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and criented, and separated by sized gaps filled with Ns to the estimated and be sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence and the sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Center: Baylor College of Medicine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a 'working draft' sequence It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

```
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality) = 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a M2.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em., EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information the better and be found at

On Nov 26, 2003 this sequence version replaced gil3567731.
Sequence from the Mouse Genome Sequencing Consortium whole genome shotgum may have been used to confirm this sequence. Sequence data from the whole genome shotgum alone has only been used where it has a phred quality of at least 30.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           COMMENT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ORIGIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.
                                                                                                                                                                                                                                                     STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of Sequence similarity are identified by BLAST (GNLO. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two excns flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality individual bases and measures of base quality are listed below. Description of the metrics can be found
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 - 200 bases

It currently consists of 11 contigs. The true order of the places are not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   157179 162389 contig of 5211 bp in length 162490 164934 contig of 2445 bp in length 165035 168246 contig of 2312 bp in length 163047 170645 contig of 2299 bp in length 170746 172143 contig of 1398 bp in length 17244 173516 contig of 1273 bp in length NOTE: This is a "working draft' sequence. It currently consists of 20 contigs. The true order of the pieces is not known and their order in this sequence record is

It currently consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1774: contig of 1774 bp in length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  REFERENCE
                                                                                                                                                   assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized agaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shorgun sequence reads. Both end sequences and whole genome shorgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a 'working draft' sequence It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DB 2; Length 245820;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           à
                                                                                                                                                                                                                                                                            CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.
                                                                                                                                                                                                                                                                                                                                                                                                                        ANNOTATION OF FEATURES:

STSS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequences similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht

If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      quality are listed below. Gaps
NOTE: This is a 'working draft' sequence. It currently consists of 9 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

The invention describes an isolated human FOXC2 promoter region. The mammalian FOXC2 promoter region for the modulation of FOXC2 polypeptide expression has therapeutic value in treating type II diabetes mellitus, obsity, hypercholesterolaemia, other cardiovascular diseases or dyslipidaemias. This sequence encodes the mouse mesenchyme forkhead 1 (MHF-1) protein (also called FOXC2 transcription factor), described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Transcription factor; FOXC2; antidiabetic; anorectic; antilipaemic; cardiovascular; FOXC2 polypeptide expression modulator; FOXC2 promoter; diabetes mellitus; obesity; hypercholesterolaemia; dyslipidaemia; cardiovascular disease; gene; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes an isolated human FOXC2 promoter region. The mammalian FOXC2 promoter region for the modulation of FOXC2 polypeptide expression has therapeutic value in treating type II diabetes mellitus, obesity, hypercholesterolaemia, other cardiovascular diseases or dyslipidaemias. This sequence encodes the human transcription factor FOXC2, the promoter of which is described in the invention

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) and acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polymucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased that affect the actifying mutations or deletions in a patient's genome that affect the actifying mutations of deletions in a patient's genome that affect the actifity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polymucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polymucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells AAK64703 cancers and cancer human immune/maematopoietic antigen genomic sequences from the present invention. AAK64942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; ds; bisulphite treatment; CpG; DNA methylation; cancer; tumour;

The invention relates to a nucleic acid comprising a sequence at least 18 bases in length of a segment of the chemically pretreated DNA of genes associated with pharmacogenomics according to one of the sequences of the earth of the pharmacogenomics according to one of the sequences of the cased that the pharmacogenomics according to one of the sequences of the complementary sequences, UNM 000781), CYP11B1 (NM 000497), CYP3A3 (NM 01990), NM 01990, NM 019900, NM 019900, NM 019900, NM 019901, NM 019902, NM 019889, NM 019893 and their complementary sequences, or a sequence (S1) chosen from 87 their complementary sequences, or a sequence (S1) chosen from 87 their complementary sequences, or a sequence (S1) chosen from 87 their complement to convert cyclosines (but not methyl-cyclosines) into uracils. Also included are an oligomer (II) in particular an oligomeder or a certaing their comprision of the sequence having a length of 9 nucleotides which hybridises to or is identical to a chemically pretreated DNA of genes associated with complements and one of seases associated with the methylation state (CpG) and/or detecting SNPs (single nucleotide polymorphisms) of the 87 sequences. The coligomers may also be used as PCR primers. The set of 87 nucleic acids tumours and cancer. The present sequence represents one the 87 DNA sequences or its complement. Note: The sequence data for this patent did concerned the property from the concerned of the printed specification, but was obtained in concerned the sequence of the seq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ..

Chlamydophila pneumoniae

WO200024765-A2

04-MAY-2000

```
The invention relates to a nucleic acid molecule from a moss (e.g., physcomitrella patens or Ceratodon purpureus) encoding a metabolic pathway (MP) protein or its portion. A vector comprising a nucleic acid is useful for protein or its portion. A vector comprising a nucleic acid containing the vector such that the fine chemical is produced and then recovered. The cell is a microorganism belonging to the genus containing the vector such that the fine chemical is produced and then recovered. The cell is a microorganism belonging to the genus containing the vector in the corresponding to the genus moses or algae, or is a containing in modulation of the production of the fine chemical such as cell results in modulation of the production of the incleic acid molecules are useful for modulating production of fine nucleic acid molecules are useful for modulating production of fine chemicals in microorganisms, algae and plants, either directly or indirectly. Plant genes originating from P. patens are useful for modifying metabolism of essential amino acids, tocopherol, riboflavin, vitamin C, etc., in plants as well as algae and microorganisms, enabling these bost cells to increase their capacity to produce the respective components as well as improving survival and fitness of the cell. The nucleic acids are useful for identifying an organism as being P. patens or its close relative in a mixed population of microorganisms, as markers for specific regions of the genome and for evolutionary and protein errording MP proteins of the invention

chlamydia polypeptides (either in vivo or in vitro) according to standard recombinant DNA methodologies. The polypeptides may then be used to veccinate against Chlamydia infections in mammals. Chlamydia, such as C. pneumoniae, are pathogens responsible for upper respiratory tract infections such as community acquired pneumonia, acute respiratory tract disease and bronchitis and may be implicated in atherosolarotic changes and asthma. The nucleic acids may also be used as probes for detecting the presence of Chlamydia nucleic acids may also be used as probes for detecting the presence of Chlamydia nucleic acids may be used as a fulgens for the diagnose infections) and the proteins may be used as affigens for the production of antibodies that may be used to detect Chlamydia proteins in samples (e.g. via enzyme linked imminosorbant assay (ELISA)). (Updated on 15-SEP-2003 to standardise OS field)
Chlamydia antigenes and the proteins they encode, useful for vaccinating against Chlamydia infections that affect the respiratory tract.

Chlamydophila pneumoniae.

```
Sequences ABB90526-ABB90715 represent novel proteins from Chlamydia

preumoniae (strain CWL029), and ABL91184-ABL91373 represent DNA encoding

then. The proteins are predicted to be immunogenic and may therefore be

useful in vaccine production and for diagnostic purposes. Chlamydia

cuseful in vaccine production and for diagnostic purposes. Chlamydia

calso involved in the development of cardiovascular diseases such as

atherosclerosis, coronary arrery disease, carcind artery stenosis,

myocardial infarction, crebrrovascular disease, aortic aneurysm,

caldudication and stroke. The proteins and nucleic acids of the invention

may be used in vaccines and pharmaceutical compositions for the

prevention or treatment of chlamydial infections, particularly chlamydia

proteins and the nucleic acids may be used in the detection of

Chlamydia pneumoniae, and the nucleic acids may be used in PCR, branched

CC Chlamydia pneumoniae, and the nucleic acids may be used in PCR, branched

CC Chlamydia pneumoniae assay or blotting techniques for determining Chlamydia

CC Chlamydia pneumoniae assay or blotting techniques for determining Chlamydia

CC Chlamydially claimed DNA which encodes a Chlamydia pneumoniae are

Specifically claimed DNA which encodes a Chlamydia pneumoniae

control of the invention. (Updated on 29-AUG-2003 to standardise OS field)

The nucleic acids may be used for the recombinant production of the chlamydia polypeptides (either in vivo or in vitro) according to standard vaccombinant DNA methodologies. The polypeptides may then be used to vaccinate against chlamydia infections in mammals. Chlamydia, such as C. pneumoniae, are pathogens responsible for upper respiratory tract infections such as community acquired pneumonia, acute respiratory disease and bronchitis and may be implicated in atherosclerotic changes and athma. The nucleic acids may also be used as probes for detecting the presence of Chlamydia nucleic acids in samples (and therefore diagnose infections) and the proteins may be used as antigens for the production of antibodies that may be used as antigens for the production of antibodies that may be used to detect Chlamydia proteins in samples (e.g. via enzyme linked immunosorbant assay (ELISA)). (Updated on samples (e.g. via enzyme linked immunosorbant assay (ELISA)).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Chlamydia antigenes and the proteins they encode, useful for vaccinating against Chlamydia infections that affect the respiratory tract.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   14-AUG-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                14-AUG-2
 Sequences AAS29814-AAS29838 represent genomic DNA molecules, which encode the cytoskeletal element-related polypeptides of the invention.

Cytoskeletal polypeptides and thear associated polymucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by determining the presence or absence of a mutation in a cytoskeletal polymucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, crebrovascular disorders such as cerebral isohaema, nervous system disorders such as cerebral isohaema, nervous system viruses and fungi, ocular disorders such as corneal infection, endocrine disorders such as cread infection, endocrine clasorders such as premature labour and infertility, gastrointestinal disorders such as cronn's disease, renal disorders such as asthma. The disorders such as cronn's disease, renal disorders such as asthma. The copypeptides can also be used to aid wound healing, to prevent skin aging the to sumburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from Wipo at the printed set the wipo.int/pub/published_por_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated human cytoskeletal element-related polypeptide useful for diagnosis/treatment of neoplastic disorders, disorders associated with neural transmission, chromosomal abnormalities, autoimmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                   The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a

(HUMA-) HUMAN GENOME SCI INC

SM Ruben Rosen CA, Barash SC, WPI; 2001-541565/60.

Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases.

Disclosure; SEQ ID NO 10824; 1701pp + Sequence Listing; English.

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and

```
This invention describes a novel mucleic acid (NI) encoding a Chlamydia pneumoniae procein (PI), given in the specification. The isolated nucleic concid is useful for diagnostic and analytical methods, such as, byridization-based assays or amplification-based assays. The protein may byridization-based assays or amplification-based assays. The protein may comprising a hybridizing fragment of NI; (2) an isolated nucleic acid (NI) that hybridizes under stringent conditions to NI; (3) an expression cassette comprising NI under the transcriptional regulation of a reasorable composition of transcriptional initiation region functional in an expression of cassette of (3) as part of an extrachromosomal element or integrated into the genome of a host cell as a result of induction of the expression cassette into the host cell, and the acilular process of the host cell; (5) a method for producing a Pl comprising areall of (4) where the protein is expressed and isolating the protein free of other proteins (6) a purified polypeptide composition comprising at least 50 weight $ 0.00 ft). (6). (Updated on 15-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human, Oestrogen receptor beta; ERbeta; ds; SNP; chromosome 6q.25.1; single nucleotide polymorphism; cardiovascular diseases autoimmune disease; systemic lupus erythematosus; arthritis; rheumatism; esteoarthritis; osteoporosis; breast cancer; endometrial cancer.

The invention relates to a novel isolated peptide comprising or consisting of an amino acid sequence selected from an amino acid sequence of a variant osestrogen receptor protein (e.g. ERbeta), or a fragment of 10 amino acids), antibodies against them, nucleic acids encoding them (including vectors for transforming cells). The gene for human ERbeta is calcated on chromosome 64.21. The variants are encoded by single nucleotide polymorphisms (SNP). The variants perioded by single nucleotide polymorphisms (SNP) in the variant peptides and proteins can be used in assays to determine the biological activity of the protein, to tail a minologies, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, to identify determine levels of the protein in biological fluids, to identify determine levels of the protein in biological fluids, to identify determine levels of the protein in biological fluids, to identify determine levels of the protein in biological fluids, to identify determine levels of the protein in biological acceptor protein and a target molecule that normally interaction between the receptor protein and a target molecule that normally interaction acceptor protein, to assess expression in disease states e.g. cardiovascular disease and autoimmune disease (e.g. systemic lupus erythematosus, arthritis, rheumacogenomic analysis and inhibiting protein function, e.g. blocking the binding of the oestrogen receptor protein to a binding partner such as a ligand. The nucleic acids encoding the proteins can be used as probes, primers, chemical intermediates and in biological assasys. The
                                                                                  Estrogen receptor gene and protein polymorphisms useful for diagnosis of individuals at risk of developing bone disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation;

                                                                                                                                             The present sequence is one of a large number of 5' ESTs derived from inchange muchan and proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' unitanshated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design

Sequence 1, Application US/09198452A

Patent No. 6559294

GENERAL INFORMATION:

APPLICANT: Griffals,

TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments

TITLE OF INVENTION: and treatment of infection

TITLE OF INVENTION: and treatment of infection

TITLE REFERENCE: 9710-003-999

CURRENT APPLICATION NUMBER: US/09/198,452A

; CURRENT FILING DATE: 1998-11-24

; NUMBER OF SEQ ID NOS: 6849

Barent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERENCE: 107196-136

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR FILING DATE: 1999-02-18

PRIOR PLING DATE: 1998-02-18

PRIOR PLING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 13569
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SOURCE INFORMATION:

THE RPCI-24 BAC Library has been constructed by Pieter de Jong and coworkers (http://www.chori.org) from male C57BL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at http://www.chori.org
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Mashington University, St. Louis Mo. For
additional information about the map position of this sequence, see
http://genome.wustl.edu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NOTICE: This sequence may not represent the entire insert of this schoe. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

The Sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Mashington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DRIAGTERTY, send mailto:egreen@nhgri.nih.gov, or see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The clone sequenced to the left is CTB-67M9, 2000 bp overlap; the clone sequenced to the right is RP11-115N4. Actual start of this clone is at base position 29168 of CTB-67M9; actual end is at base position 129727 of RP11-20K20.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J., and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from the seearch Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute
(http://bacpac.med.buffalo.edu)
                                                                                                                                                                                                                                                                                                                                                                This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 0); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Polymorphisms exist between RP11-20K20 and CTB-67M9. Data from AC010764 was used to finish this clone, AC084381. Location/Qualifiers
